IDEA 1050
8 February 1963
Copy 5 of 10

MEMORANDUM FOR: Chief, Operations Division, OSA

SUBJECT : System IX(A) Airborne Tests, Request
for

25X1

1. [REDACTED]

Palo Alto, California, indicated by telecon on 8 February 1963 that the prototype model of the System IX(A) will be ready for installation (preparatory to airborne tests) during the week of 11 February 1963. For production planning purposes, [REDACTED] suggested the possibility of tests being scheduled during the week of 18 February or the week of 25 February. This possibility is being held in abeyance pending your advisement.

25X1

2. Accordingly, it is requested that necessary action be taken to arrange for the installation and testing of the prototype model. The outcome of the tests is desired to determine whether any changes may be required in the partially pre-fabricated production models now under construction.

3. It is further requested that arrangements pertinent to the technical performance of System IX(A) include coordination with Chief, EAD/OSA.

4. For your information, planning for the tests need only provide for conical scan deception of AI radars. The CW-Doppler portion of the previous System IX has not been retained.
